

Editorial

Dear readers, authors, and reviewers: sorry for the inconvenience, we had been under maintenance to serve you better!

Prezados leitores, autores e revisores: estivemos em obras para melhor atendê-los!

Angelita Cristine de Melo
Elisangela Costa Lima
Reviewers RBFHSS 2019

In this editorial we commemorate the symbolic removal of the “Sorry for the inconvenience. We are under construction to better serve you” sign. Although we are in the midst of Industrial Revolution 4.0, we could have used the warning above in volume 10. In recent years, we have seen major changes in academic publications¹. For the Brazilian Journal of Hospital Pharmacy and Health Services (*Revista Brasileira de Farmácia Hospitalar e Serviços de Saúde, RBFHSS*), 2019 represented a transition that will also go down in its history.

And, as nature does not make leaps, to get here it was necessary to improve each product of the development of new chemical technologies and the world energy matrix throughout the First (1760), Second (1860), and Third (1950) Industrial Revolution. The latter, also called the “Information Age”, marked the shift from analog and mechanical systems to digital systems as a direct result of the development in computers and information and communication technologies².

It seems that it was yesterday that pharmacists researched the information they needed in the Chemical Abstract using typewritten records or microfilms³. It was not so long ago that journals were printed and sent worldwide by mail. A whole complex and expensive chain of knowledge production, available to few, through semiannual or annual subscriptions¹. Most obtained access to articles through visits to libraries to consult their intricate cataloging system. Finding a particular article, based on a combination of letters and numbers, was almost a gift or a curse, if someone had removed that issue of the journal or borrowed it...

With Industrial Revolution 4.0, we had the organization of cyber-physical systems that communicate and cooperate with each other and with human beings in real time. Through cloud computing, virtual copies of the physical world are generated and decentralized decisions are made². Many journals have chosen not to have printed versions. Their articles are often available for free because management has become cheaper and more agile. The online format was made possible by the advent of new technologies such as PDF (Portable Document Format)¹.

RBFHSS has been following this evolution and, in order to contribute to society, since 2018, it translates all the articles published into English. Coverage of translation costs by the Brazilian Society of Hospital Pharmacy and Health Services has been extended to the years 2019 and 2020.

A system for processing articles that would ensure more agility, security, and access to information for authors and editors was another challenge overcome. In 2019, we transitioned through 3 different systems in the journal, until we obtained the best results in performance and safety. A new information management platform (“Periódicos nas Nuvens”) was contracted. The changes were not restricted to the journal's information and communication processes.

The editorial board was expanded, the publication rules adjusted to international standards, and the internal management of the journal had its processes reviewed. All

of these changes provided better transparency and agility to the journal's decision-making processes. The visible part of this is the reduction in the time for the first response to the authors in a week or less and in the editorial decision times for publication or not in the submitted article.

We started 2020 with layout changes that, in addition to being more modern and with a softer aesthetic, meet international formatting standards. This year we will work hard to expand the indexing of the journal and improve its classification in Qualis Capes.

The expansion in the capacity and speed of knowledge dissemination requires, however, the hard work of a team that goes beyond the virtual walls of any scientific journal. In the editorial text entitled "Dear reviewer: double blind, blind or open review?", we emphasize the importance of peer review and the appraisal by the of reviewers⁴. The possibility of an open review was included, in which the researcher who analyzes the quality of the article and wishes to receive recognition for this work, is appointed in its publication. This editorial received a nominal tribute to all reviewers of the year 2018⁴. This "innovation" is a recognition of your valuable work. Thus, these reviewers are included as collaborators of the text, due to the peer review work of the previous year, which does not mean, however, authorship of the editorial content itself^{1,4}.

Likewise, we reiterate our consideration to all the reviewers who, free of charge and for the development of science, devoted part of their time to review our articles in 2019. Your value is priceless for RBFHSS. There is no quality scientific production without every careful and critical look in the evaluation of the manuscripts. Dear 2019 article peer reviewers, thank you very much!
